

# Weather Update

National Weather Service – Houston/Galveston, TX

## Bottom Line

- Showers and thunderstorms expected ahead of a cold front starting late this morning through this evening, Timing of the strongest storms:
  - Brazos Valley: early afternoon
  - Houston Metro: late afternoon to early evening
  - Coast: evening
- There is both a Slight and Enhanced Risk for severe storms across eastern parts of the region.
- Steadily cooler temperatures expected for the remainder of the week with a reinforcing (dry) front late Thursday.
- Winds/seas will be elevated for much of the week.

### What Has Changed Since Previous Email?

- Northeastern counties were included in an Enhanced Risk yesterday

### Urban Flash Flood Messaging

Localized heavy downpours are possible for portions of Southeast Texas. Based on forecast conditions, NWS Houston will be utilizing the following urban flash flood messaging for this event:

### Street Flooding

- Drive with caution. Cars may flood in low-lying areas. Ponding on roadways may increase risk of hydroplaning.
- Pay attention to the weather. Monitor the NWS, your local media, HCFCD and other official weather information sources.
- Rain may move repeatedly across the same area, causing a rapid rise on creeks and bayous. However, creeks and bayous are not likely to exceed their banks.
